-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 12-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Takase US 6,250,285. The reference discloses a method for operating a fuel metering system of a motor vehicle, a fuel being delivered by at least one supply pump to at least one high pressure area and being injected by at least one fuel injector from the high pressure area directly into at least one combustion chamber, the method comprising: detecting a pressure in the high pressure area using at least one sensor 13; and adjusting the pressure in the high pressure area using at least one pressure regulating element 1; wherein a change in pressure in the high pressure area over time is limited as a function of a specified injection quantity error. Note that the permissible pressure gradient values for the high-pressure area are stored in speed-dependent and load-dependent characteristic maps.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited documents showing fuel pressure sensors and injection feedback control.
